

Disaster Recovery Private Cloud

www.clone-systems.com

Our Cloud, Your Peace of Mind

The most resilient and cost-efficient disaster recovery option for your IT infrastructure is Clone Guard®, an offsite-managed disaster recovery solution. Clone Guard® Cloud computing environments, which come in secured private configurations, can be used to create virtual snapshots of your systems, applications, and file information on Clone Systems' certified secure servers, which have a guaranteed 99.99% uptime. All data is accessible 24/7/365 utilizing secured virtual private networks. The result is your company's environment never faces prolonged critical downtime, your business' continuity processes will be clarified and leaner, and your service costs will be reduced, sometimes dramatically. Our private Cloud service, Clone Guard® CG-DRCL®, used in conjunction with disaster recovery best practices, provides your enterprise with the best and most affordable disaster recovery backbone available

The Clone Guard® DRCL® Solution

Clone Guard® virtualizes all data across your network, applies security, identity, service-level, license, and policy management provisions to the data, and facilitates dynamic resource allocation across the entire enterprise. The Clone Guard® DRCL® frees your system administrators from the complex and demanding tasks associated with setting up stand-alone servers during a disaster. Clone Systems manages all those tasks automatically and remotely, with no long-term contract requirements.

Multi-Vendor Support

CITRIX®

IBM

ORACLE®

vmware®

Xen®

CG-DRCL® Features

Private Cloud protection against security-related losses in revenue, productivity, data, confidence, etc.

Dynamic resource allocation effectively maximizes the utilization of existing resources.

One low monthly fee, no long term contracts required

All DR mechanisms firewall, (IDS, AV, VPN) included in monthly contract

Provisions and a DR infrastructure that accommodates a complete remote system recovery.

Integrity of all system backups is guaranteed; DR facilities are nearly infinitely scalable.

Data is always available for recovery from secure, encrypted VPN tunnels or data circuits.

Much more efficient and cost-effective DR model than duplicate systems, more secure than Public Clouds.

The long-term advantages of partnering with Clone Systems and its veteran security team assures that your off-site backups will be duly monitored and be available in real-time, at any time.
