

Intrusion Detection & Prevention Services

Real-time Network Security Solutions

Clone Systems® delivers round-the-clock Managed and Monitored IDS/IPS Services. Malicious threats and unauthorized access to your critical resources are detected, blocked and logged, 24x7x365.

Securing your network is our top priority. Clone Systems Security Experts monitor your data networking environment from our Network Operations Security Center (NOSC). The NOSC is located within our enterprise Data Center. Our advanced monitoring tools allow our Security Experts to reliably separate actual security threats from *false positives*. Detailed logging of all events which are relevant to your operating environment, are always available online. Our team of application developers is working on a new set of tools that will enhance monitoring and reporting capabilities for end-users.

Clone Systems® is an Authorized Sourcefire® Managed Security Service Provider. Sourcefire® is the industry leader, providing IDS and IPS hardware with remarkable detection capabilities. Our advanced Intrusion Detection & Prevention Solutions, consist of Sourcefire's top-performing IDS/IPS appliances, coupled with their Real-time Network Awareness (RNA) devices. You can expect accurate information for real-time network protection, and detailed compliance reporting.
